SithCare – Fact-Finding Analysis Report

Group 10

SE/2022/046 - Lochithya Hettiarachchi

SE/2022/005 - Anushka Dilinuwan

SE/2022/010 - Adhithya Jayawardhana

SE/2022/025 - Vindya Wickramathilaka

SE/2022/041 - Ramesh Krishan

Supervisor – Eng. Dr. Trishon Madushanka

24/05/2026

Overview

This document summarizes the response analytics and visual insights gathered from the SithCare User Experience & Accessibility Survey conducted during the Requirements Engineering phase.

The analysis focuses on:

- User Interface (UI) preferences
- User Experience (UX)
- Accessibility requirements
- Telemedicine usability
- Navigation preferences
- Platform feature expectations

The results support the development of the Software Requirements Specification (SRS) and UI/UX design decisions.

Dataset Information

SithCare - Fact-Finding Data Analytics Dashboard

1. Count of Appointment Receive Method by Age Group (Pie Chart)

Analysis

- The majority of responses were from the **18–25 age group**, contributing approximately **82.42%** of the total responses.
- Smaller contributions came from:
 - **26–35**
 - **36–50**
 - **Under 18**
- This indicates that the survey mainly represents young adult users, which aligns well with university students and young professionals.

Insight for SithCare

- The platform should prioritize a **modern, mobile-friendly interface** suitable for young adults.
 - Features such as quick navigation, online appointment booking, and responsive dashboards will likely improve usability for the dominant age category.
-

2. Count of Age Group by Internet Stability (Horizontal Bar Chart)

Analysis

- Most users reported having:
 - **Strong**
 - or **Moderate** internet stability.
- Very few users reported low connectivity.

Insight for SithCare

- Since most users have stable internet access, telemedicine and video consultation features are feasible.
 - However, lightweight UI optimization and fallback low-bandwidth support should still be considered for users with weaker connectivity.
-

3. Count of Language Preference by Web App Booking (Line Chart)

Analysis

- Most respondents answered:
 - **Likely**
 - or **Very likely**
to use a web-based appointment booking system.
- Very few users selected:
 - Not sure
 - Unlikely

Insight for SithCare

- Users show strong acceptance toward digital healthcare appointment systems.
 - This supports the implementation of:
 - online appointment booking,
 - telemedicine scheduling,
 - and digital healthcare workflows.
-

4. Count of Language Preference by Current Appointment System Satisfaction (Donut Chart)

Analysis

- Most respondents selected:
 - **Neutral**
 - or **Satisfied**
regarding current appointment systems.
- A smaller percentage expressed dissatisfaction.

Insight for SithCare

- Existing systems partially satisfy users but still leave room for improvement.
- SithCare can differentiate itself through:
 - multilingual accessibility,

- improved UX,
 - mental health-focused features,
 - and simpler appointment workflows.
-

5. Count of Doctor Appointment Booking by Current Appointment System Satisfaction (Column Chart)

Analysis

- The highest number of users fall under:
 - **Neutral** satisfaction.
- Fewer users are strongly satisfied or strongly dissatisfied.

Insight for SithCare

- Current appointment systems may lack convenience, accessibility, or specialized healthcare support.
 - SithCare should focus on:
 - intuitive booking workflows,
 - accessibility,
 - responsive UI,
 - and efficient appointment handling.
-

6. Count of Appointment Receive Method (Gauge Chart)

Analysis

- The gauge indicates approximately:

165 total responses

- This represents a good sample size for initial fact-finding and requirements analysis.

Insight for SithCare

- The collected responses provide sufficient preliminary evidence to support:

- UI/UX decisions,
 - accessibility requirements,
 - telemedicine functionality,
 - and multilingual platform support in the SRS document.
-

Overall Dashboard Conclusion

The dashboard analysis suggests that:

- Users are comfortable with digital healthcare solutions.
- Mobile-friendly and simple UI designs are highly important.
- Telemedicine functionality is feasible due to stable internet access among most respondents.
- There is demand for more accessible and user-centered healthcare platforms.
- SithCare can improve upon existing systems by focusing on:
 - multilingual support,
 - mental health accessibility,
 - emergency support,
 - and simplified appointment management.
